Dear Mr. Kanare:

Fallout Sample Numbers EG100401-1 and EG100401-2

The Puget Sound Clean Air Agency is sending particulate dust fallout sample Numbers EG100401-1 and EG100401-2 to your laboratory for analyses. Enclosed are Purchase Order No. 2002277 with analysis instructions and the Chain of Custody form. Upon receipt of the sample, please sign the original Chain of Custody form. After any sample has been tested or split, and the split sample is ready to return to this office, please sign the original Chain of Custody form and return it to this office.

The Agency requests analyses be performed on particulate dust fallout sample Numbers EG100401-1 and EG100401-2 that includes the following: optical micrographs, optical microscopic analysis (following Petrographic Services Report) and X-ray diffraction (XRD) analysis.

Please verify the presence, and provide quantitative estimates, of clinker and other raw and finished materials associated with Portland Cement Manufacturing. Report the identified constituents in relative order of abundance. Follow the procedures and reporting format used for the report that you have in your office titled "Puget Sound Air Pollution Control Agency - Dust Analysis PO No. 60515 and No. 60619" dated October 27, 1995. Please indicate your findings and a description of your conclusions.

After all the analyses are performed, this Agency has agreed to allow CTL to split this sample with the Ash Grove Cement Company located at 3801 E Marginal Way S, Seattle, WA 98134, if a sample is requested and your sample analysis is not compromised. Any split samples should be noted and referenced in the analysis report of the sample for the Agency.
